EDUCATION

University of Pennsylvania *Aug 2023 - May 2027*
Computer Science, Accelerated Masters of Science in Engineering *Philadelphia, PA*
Computer Science, Bachelors of Science in Engineering

- GPA: 3.96
- Selected coursework: Data Structures, Algorithms, Artificial Intelligence, Computer Security, Databases, DevOps, Cryptography
- Clubs and societies: IEEE-HKN Lambda Chapter (Vice President)

EXPERIENCE

Atlassian *May 2026 - Present*
Software Engineering Intern *Seattle, WA*

- Develop highly requested feature to display card counts on lists in Trello Android, a 10M+ downloaded personal productivity tool.
- Introduce continuous integration (CI) pipeline to automatically optimize app before release, lowering app startup time by 22% from 14% with the previously manual process.

Aisera (www.aisera.com) *May 2025 - Dec 2025*
Software Engineering Intern (Summer, Fall) *Santa Clara, CA*

- Aisera is an Agentic AI platform that leverages AI/ML to automate and transform enterprise service desk operations across IT, HR, finance, legal, facilities, and customer service domains.
- Led initiative to incorporate Dynamic Application Security Testing into development cycle at Aisera.
- Developed internal tool for automating scan scheduling and boosting scan coverage by 200% on AWS using Python.
- Led penetration testing initiatives and worked with multiple engineering teams to address vulnerabilities quickly.

Movius (www.movius.ai) *May 2024 - Aug 2024*
Software Engineering Intern *Fremont, CA*

- Developed speech-to-text service hosted in AWS EC2, leveraging machine learning to provide live captioning to phone calls, improving accessibility.
- Decreased word error rate in transcripts to ~8% and end-to-end latency to <1 second.

Penn Engineering *Aug 2024 - Present*
Teaching Assistant and Committee Head *Philadelphia, PA*

- Teach students in CIS 1200 (Programming Languages and Techniques I) and CIS 5510 (Computer and Network Security) during office hours and recitations.
- Lead group of TAs to maintain course infrastructure including testing and deployment of auto-grading systems.

Penn Security and Privacy Lab *Dec 2024 - Present*
Research Assistant *Philadelphia, PA*

- Develop state-of-the-art private information request protocol for databases under supervision of Prof. Sebastian Angel.

SKILLS

Languages	Python, Java, Kotlin, Dart, Go, OCaml, C/C++, SQL
Platforms	Linux, Android, Windows
Web	HTML/CSS, TypeScript, JavaScript, React
DevOps	Git, Docker, Kubernetes, Terraform, AWS
Security	Burp Suite, ZAP, Snyk, Ghidra

PROJECTS

Arrivo: a realtime Amtrak train tracking app for Android

- Implemented in Kotlin with Room local database and Hilt dependency injection using Jetpack Compose.
- Developed Glance widget and custom on-device decryption for Amtrak APIs.

Penn Operating System

- Developed a unix-like OS with priority-based round robin scheduler, process management, FAT filesystem, arbitrary script execution, and shell with builtins and filesystem commands.

Tabby: make splitting the tab as easy as paying it

- Built a mobile-first PWA in React and Python with receipt parsing using Google Gemini, auto-generated Venmo links, and MongoDB database.
